The development and prosperity of our beloved homeland goes through the creation of network and information technology infrastructures and the field of commerce and international affairs, and one of its manifestations is the flourishing of the HI-TECH industry and advanced technologies. By applying the knowledge and experience of experts, as well as by taking advantage of advanced technologies and new services in this field, we can build a comfortable and safe path that will pass through the ups and downs and strengthen the bond between people so that with our help we can take an effective step towards achieving the prosperity of our country.

We intend to actively participate in the creation of network and telecommunications infrastructures and superior technologies in the field of HI-TECH and technological and innovative industries of the country in the vast expanse of our homeland, by utilizing the knowledge and experiences of experts specializing in commerce and international affairs, so that by providing superior models in this way, we can be one of the well-known commercial names among trading companies and telecommunications network infrastructure and the intelligent manufacturing industry and import and export.

Transforming Koosar kooh noor Arvand International Company into an advanced organization in the HI-TECH and intelligent technology industry is one of our fundamental goals, and we will undoubtedly always try to take this path with a steely determination to be a strong leader in our technology and infrastructure market.

سخن مدیر عامل CEO's speech

مواد غذایی — FOOD

پسته-Pistachio

Pistachios are one of the best and most popular types of nuts in the world. They are rich in nutrients and minerals and have many properties and benefits for the health of the body. Our beloved country Iran is known as the largest producer of pistachios in the world. The competitive advantages of Iranian exported pistachios include: variety of pistachios, high percentage of kernels, and excellent taste.

آبمیوه — Juice

The best raw materials are provided for the production of high-quality fruit juices. Natural export juices are suitable for all ages, especially children. The high taste and quality of export juices are organic and natural. With health supervision and high-quality standards, they are competitive in the field of export

کنسروجات — Canned goods

The geographical location, diverse climate, and fertile land allow Iran to produce a variety of fruits, vegetables, fish, and other foods. All exported canned goods comply with labeling, nutritional information, and health regulations .

کیفیت مواد غذایی در ایران — Food quality in Iran

Food product manufacturers in the field of export consider standards, regulations, and customer expectations. Important parameters in the export of Iranian food industries include: quality, standards, aroma and taste, freshness, appearance, packaging, safety, and nutritional value, covering sensory characteristics, stability, and ethical considerations.

سنگ و متریال ساختمانی

Stone and building materials

سنگ ساختمانی— Building stone

Today, we are witnessing the construction of large and attractive housing, complexes, apartments, hotels, and restaurants all over the world. The increasing construction in the world is increasing the need for building stone day by day, because stone is known as one of the most important building materials and has many uses. And the diversity of building stones has made Iran one of the Middle East stone export poles. Exported stones are mainly supplied to the world market in the form of cut, ready-made carcasses, or in the form of stone sheets in various sizes of tiles and slabs. Stone exports are carried out in two forms: uncut (cut) and cut (slabs and tiles). Texture, pattern, and color are three effective factors in the selection of stone by architects. Architects have invented modern ideas in the use of stone in the construction industry. The type of Iranian building stone is welcomed in the world. Marble, travertine, granite, and Iranian marble are stones that have many fans.

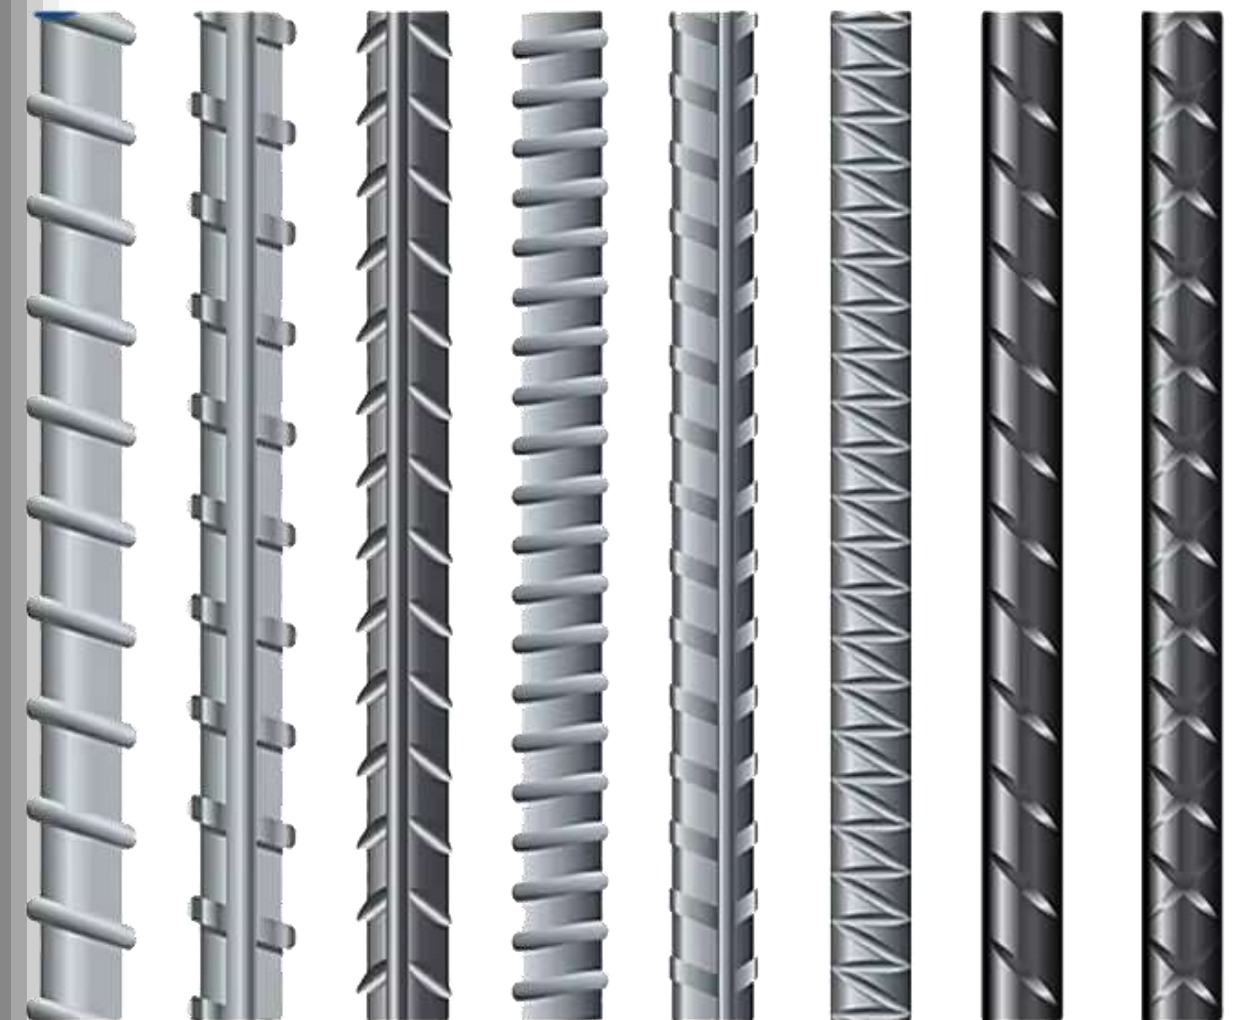

متریال ساختمانی— Building materials

Exporting building materials is one of the most popular ideas in the field of business; because our country is rich in resources and potential to produce the highest quality materials in various items. Building materials can be divided into raw, synthetic, natural, mixed, etc. and are based on three principles: type, production method and application. Exporting building materials is not only a two-way business with a focus on the manufacturer, but you will also cooperate with other industries in this direction.

In the export process, specific licenses are issued for each type of product

Iran's Competitive Advantages

1- Access to cheap raw materials:

Proximity to rich oil and gas resources has reduced production costs.

2- Transportation infrastructure:

The presence of advanced export terminals in the country provides fast and safe transportation.

Iran is one of the largest producers of oil and gas in the world, and its oil industry plays a vital role in the economy, especially in the export sector. Due to its huge oil and gas reserves, Iran is able to produce large quantities of these products and can export them to different countries.

The export of petroleum products in Iran is supervised and managed by several government and private institutions. The most important institutions related to these exports are:

1-Ministry of Oil: This ministry is responsible for the production and distribution of petroleum products and carries out the necessary planning for the export of these products.

2-National Iranian Oil Company: As the largest state-owned company in the field of oil, this company is responsible for a major part of the export of oil and petroleum products.

3-Customs of the Islamic Republic of Iran: Customs is responsible for supervising the process of exporting and importing goods, and petroleum products are also subject to these supervisions.

Polymer and petrochemical products

Exports of Iranian petrochemical products are carried out through the National Iranian Petrochemical Company (NPC) and its other subsidiaries. One of the important production sectors in the oil and petrochemical industry is the production of plastic raw materials, and the export items of these materials include propane, butane, heavy polyethylene, propylene, etc. Also, polymer and chemical materials are one of the essential goods for people all over the world today. The methods of obtaining export licenses for different goods are different. Among the important organizations related to obtaining export licenses are the Ministry of Industry, Mines and Trade, the Ministry of Agriculture, the Ministry of Health, and the National Standards Organization.

The petrochemical industry is one of Iran's strategic industries, accounting for a significant portion of the country's non-oil exports.

With its vast natural gas and oil resources, Iran has become one of the world's largest producers and exporters of petrochemical products. These products include a variety of plastics, chemical fertilizers, raw materials for the paint and resin industries, and industrial chemicals.

Export products include:

1- Polymers: Products such as polyethylene and polypropylene, which are used in the packaging and plastic production industries.

2- Chemical fertilizers: Urea and ammonia, as key products in agriculture, account for a major portion of Iran's petrochemical exports.

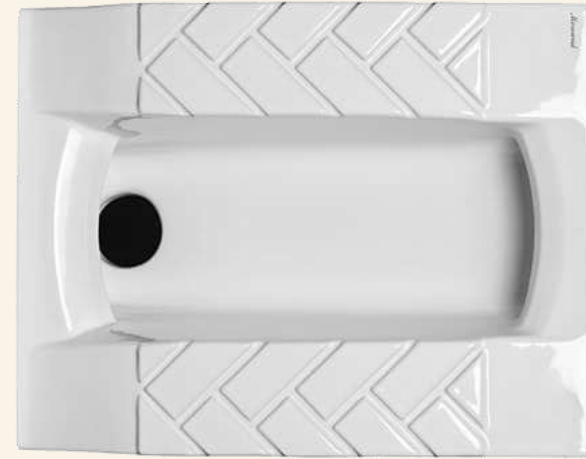

3- Basic products: Materials such as methanol, ethylene, and propylene, which are used in the production of a variety of industrial goods.

سنگ توالت و شیر آلات بهداشتی

Toilet stones and sanitary taps

Toilet stones produced with export quality have standards and are made of quality materials in glazing and with less water absorption. The rimless export stone type is designed with ergonomic and elegant design. Different dimensions and sizes of toilet stones have different depths.

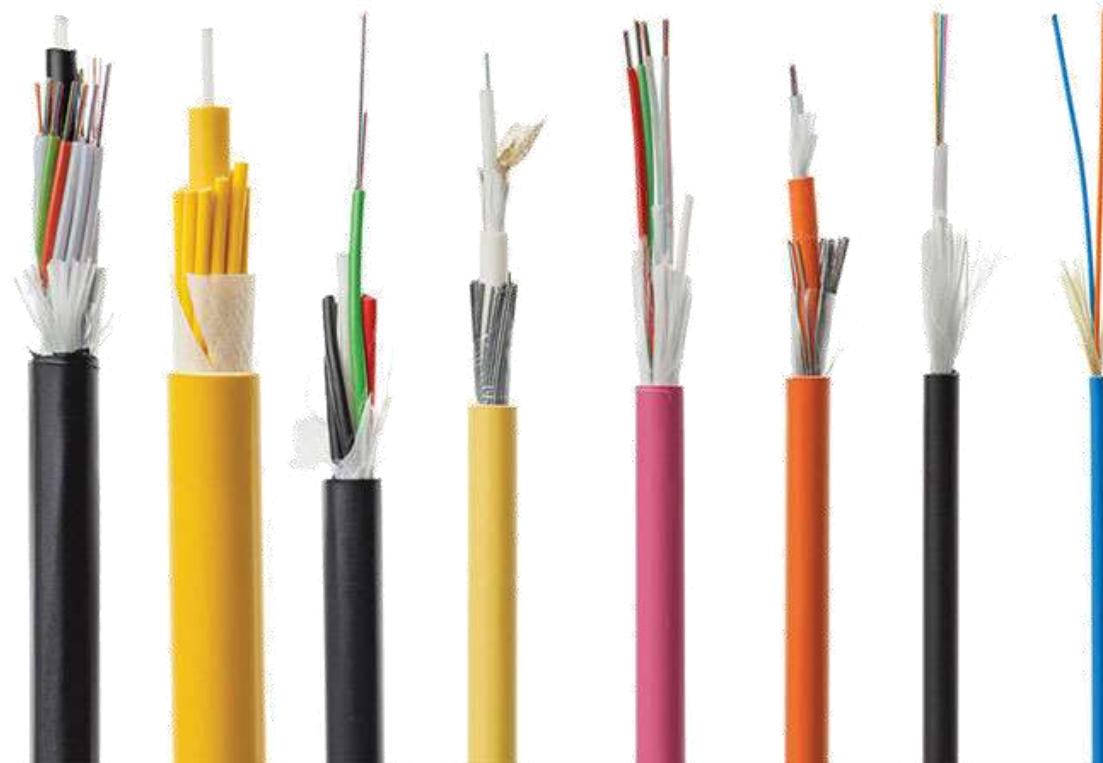

- Flat or shallow with a height of 18 to 20 cm: suitable for apartments;
- Semi-deep between 20 and 22 cm: suitable for apartments with standard ceiling heights;
- Deep and deep between 23 and 26 cm: suitable for ground floors, gardens and villas.

صنایع الکترونیک و سیم و کابل

Electronics and Cable Industries

Wire and cable are two essential elements in the world of communication and information transmission that are used in a variety of industries and applications. A wire is a metallic or non-metallic strand used to transmit electrical current or information between two points or devices. A cable is a set of wires or optical fibers that are arranged together and protected by a common protective covering. Types of cables include: coaxial, Ethernet, fiber optic, USB, HDMI. Important characteristics of the produced wire and cable include thickness and material type and number of strands.
